Solve each problem.

A middle school has 255 students. A high school has 6 times as many students. How many children are there at the high school?

A train can carry 365 passengers. How many could it carry on four trips?

six trips?

Make sure children understand the convention of multiplication, i.e. multiply the ones first and work left. Problems on this page may result from gaps in knowledge of the 2, 3, 4, 5, and 6 times tables. Errors will also occur if children neglect to regroup.
